

Final Project Summary

Yves Paultre

Key Learning Points

- It always pays to examine the data to ensure it matches expected patterns.
- What you are expected to do may not always be possible. Roll with the punches, but seek clarification where possible.

New Skills Acquired

- Process Evaluation - being able to determine whether deviation from expectations is due to the data itself, or the system used to process it
- PowerBI Relationships - how to link tables in PowerBI so that data readouts reflect the relationships between data points
- Flexible Extrapolation - proper use of inference and analysis to determine functional responses to unexpected scenarios
